

## Is Seeing Really Believing? A Really COOL Optical Illusion

### What To Do

1. Print this page and tape it to a wall. Look at the above images from a couple of feet away, 'Mr. Angry' is on your left and 'Ms. Calm' is on your right.
2. Now move back about 12-15 feet from the wall. Now look at the images. Amazingly, they have switch places!!

Does this prove that we sometimes may not be seeing what's actually there?

(This illusion is often credited to Phillippe G.Schyns and Aude Oliva of The University of Glasgow.)
